SUMMARY

AI and Data Science leader with 5+ years of experience driving customer intelligence strategy and production ML initiatives at Amazon and Samsung. Led cross-functional teams delivering AI products at 380M-customer scale while partnering with Business & Executive Stakeholders to define roadmaps, prioritize investments, and deliver measurable business outcomes. Combines deep technical expertise with product thinking, people leadership, and organizational execution.

EXPERIENCE

Data Scientist, Samsung Electronics America

Jan 2023 - Present

- Led Customer Intelligence for Samsung's TV business, managing an 8-member team responsible for customer segmentation, propensity modeling, & ML decision systems; enabled targeted marketing strategies that contributed to ~200% profit growth.
- Directly managed a 3-person team to architect and roll out an AI-powered customer support automation platform across 26 teams spanning 5 organizations, achieving 89% routing accuracy, 82% automation, and reducing manual effort by ~210 hours per week.
- Architected and operationalized Samsung's customer propensity scoring platform for CRM and Digital Marketing teams, prioritizing high-conversion audiences across 380M customers and contributing to ~60% revenue growth over three consecutive quarters.
- Established an ML-driven product affinity ranking system across 380M customers and 35 product categories, replacing heuristic segmentation to improve campaign performance by 85% while reducing experimentation cycles by ~50% through automated ML pipelines.
- Designed a standardized customer profiling framework for 380M customers, creating reusable customer representations that unified segmentation across CRM Analytics, Marketing, and downstream ML applications.

Software Development Engineer, Amazon - Payments ML

Jun 2021 - Jan 2023

- Partnered with Product, Data, and Client stakeholders to translate business requirements into a prioritized ML and data platform roadmap, guiding system-level development and delivery planning.
- Built an end-to-end payment ML system with Spark pipelines (feature engineering, training, validation; AUC > 0.92) and QuickSight monitoring; deployed this real-time model for checkout and retry flows generating personalized payment rankings optimized for success probability and chargeback reduction, with extensible support for issuer and bank offer signals.
- Architected a reusable ML observability framework evolving from a payment recommendation system into a standardized template adopted across 8 production models (payment + consumer journey), enabling unified monitoring of model performance, business KPIs, data drift, and system health via AWS CDK, CloudWatch, and QuickSight dashboards.
- Designed and deployed a hybrid ML data compliance and security workflows combining automated PII/schema validation and CI/CD gating with manual governance reviews; covered data storage security, access controls, and GDPR/CCPA deletion compliance, serving as POC to standardize and scale compliance across ML systems.
- Mentored 5 Engineers accelerating onboarding and enabling effective contribution to production ML systems through technical guidance and integration support within the team.

Data Science Intern, TechPoint

Jun 2020 - Jul 2020

- Developed county-level daily COVID-19 outbreak forecasting models for Indiana using LSTM-based time-series approaches, improving prediction accuracy to 95% and enabling more reliable short-term regional outbreak estimation.
- Performed exploratory and geospatial analysis to identify high-impact counties and disease spread patterns, integrating insights into interactive Tableau dashboards that improved stakeholder engagement and increased dashboard-driven web traffic by ~5%.

PROJECTS

AIMLever

- Volunteer AI Strategy Advisor for an analytics startup, guiding AI portfolio prioritization, project scoping, success metrics, resource allocation while mentoring a 20+ member data organization across DS, Analytics & Data Engineering.
- Designed and led an AI upskilling program for 25 professionals (DEs, Analysts, and PMs), enabling successful transitions into AI-focused roles with an average 35% compensation increase; continuing to mentor alumni and develop subsequent cohorts.

LitLens

- Designed and built an end-to-end research intelligence system (RAG-style pipeline) after architecture research enabling automated ingestion of open source scientific papers, patents, and technical reports with LLM-based structured extraction, embedding-driven clustering, and multi-signal ranking, deployed locally for active use.
- Currently architecting an analytics platform with versioned analyses, event-driven user behavior tracking, and decoupled scoring pipelines enabling personalization and knowledge graph-based recommendations; also plan to migrate from local deployment to a Raspberry Pi home server with a path toward cloud-based productization.

CVPilot AI

- Architected and Deployed CVPilot AI to local system, an LLM-powered resume builder (LLaMA) that converts project details into ATS-optimized, role-tailored bullets using a two-stage verification pipeline (LLM-as-judge + keyword grounding) to reduce hallucinations; also ranks best-fit format across 10 resume templates based on role fit.

EDUCATION

Master of Science, Data Science - Indiana University Bloomington

Aug 2019 - May 2021

Bachelor of Engineering, Electronics and Telecommunications - University of Mumbai

Aug 2015 - May 2019

SKILLS

Leadership: People & Stakeholder Management, Technical & Cross-functional Leadership, AI & Product Strategy, Mentorship

Machine Learning: Customer Intelligence, Recommendation Systems, NLP, GenAI, RAG, Experimentation & A/B Testing, Spark, Airflow, AWS (CDK, CloudWatch), GCP, ML Observability

Programming Experience: Python (TensorFlow, PyTorch, PySpark), SQL (Hive, BigQuery, PostgreSQL), R, Tableau, QuickSight
